EDUCATION

Jain Deemed to be University

B.Tech – CSE (Data Science) GPA: 8.8

Bangalore, Karnataka, India

July 2019 – June 2023

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript

Backend Engineering: Spring Boot, REST APIs, Node.js

Frontend Development: Angular, HTML5, CSS3

Databases: MySQL, PostgreSQL

Cloud & DevOps: AWS (S3, Lambda, MediaConvert, SQS, EventBridge), Docker, Nginx, Git

Auth & Security: Keycloak, Spring Security, OAuth2, JWT, MFA, Session Management

Tools & Practices: Postman, Jira, GitHub Copilot, Flyway, Agile/Scrum, SDLC, Code Reviews, Prompt Engineering

EXPERIENCE

Zessta Software Services | Hyderabad, India | *Software Engineer I*

Sep 2024 – Present | *On-Site*

Tools and Technologies – Java, Spring Boot, Angular, TypeScript, AWS, Keycloak, Node.js

- Contributed to the development of a large-scale **commercial real estate platform** in Australia by building scalable **full-stack applications**, **backend systems**, **property research tools**, and **centralized authentication** solutions.
- Built a fault-tolerant **large-file upload system** for **4K drone videos** and paired **SRT files** using **multipart uploads to S3**, **Web Workers**, and **IndexedDB** with **pause/resume**, **network recovery**, and multi-file upload support, processing **3+ TB** of media monthly.
- Developed an **event-driven video processing pipeline** on **AWS** using **Lambda**, **MediaConvert**, **EventBridge**, and **SQS** to generate **adaptive bitrate HLS streams** with **HD** and **SD** renditions for optimized streaming.
- Built **backend APIs** and **SQS-based status tracking services** with **retry** and **Dead Letter Queue (DLQ)** support to reliably monitor **video processing workflows** and synchronize **real-time frontend** updates.
- Migrated a suite of applications from legacy authentication to centralized **Keycloak-based authentication** with **MFA**, **session management**, and **single-device login enforcement**, eliminating unauthorized account sharing and strengthening **platform security**.
- Customized **Keycloak authentication flows** and **login themes** to provide a unified and secure authentication experience across multiple business-critical applications.
- Migrated legacy **Node.js** and **MySQL** stored procedure-based services into modular **Spring Boot** microservices following the **Strangler Fig migration pattern** for gradual system modernization.
- Designed and developed an **AI-assisted multi-agent orchestration workflow** using **Claude Opus** to automate **migration** and **refactoring** of MySQL stored procedures during legacy-to-Spring Boot modernization.
- Built an **AI-driven automation system** to analyze **schema change scripts** and automatically update dependent stored procedures across **7 database schemas** and **1400+ live stored procedures**, significantly reducing manual migration effort.
- Participated in large-scale **bug bash** and testing activities, leveraging **GitHub Copilot**, **Claude Console**, and **AI-powered VS Code** tools to accelerate debugging and reduce bug resolution time by nearly **50%**.

OpenText Technologies | Bangalore, India | *Software Engineer Intern*

Aug 2023 – Feb 2024 | *On-Site*

Tools and Technologies – Java, Spring Boot

- Contributed to **feature development**, **bug fixes**, and **client-specific enhancements** for the **OpenText AppWorks** platform, improving **application stability** and overall user experience.
- Investigated and resolved **frontend** and **backend** issues while developing and executing **automated test cases** to ensure **platform reliability** across multiple workflows and platform versions.

PROJECTS

Smart Pantry Inventory & Expiry Management System 🗄️

Tools and Technologies – Angular 21, Spring Boot, PostgreSQL, Spring Security, JWT, Flyway, Docker, Nginx, Vercel, Render, Neon

- Built a secure **full-stack pantry inventory** app with **Angular 21 (SSR)**, **Spring Boot**, and **PostgreSQL**, featuring **JWT authentication**, **REST APIs**, and **per-user data isolation** via **Spring Security**.
- Implemented **Flyway database versioning** with **3 incremental migrations** for consistent **schema evolution** across environments.
- Containerized with **multi-stage Docker builds**, **Nginx reverse proxy**, and **Docker Compose** with **health checks** and **isolated networking**.
- Deployed across **Vercel** (frontend), **Render** (backend), and **Neon** (PostgreSQL) with **environment-specific configuration profiles**.
